30 Years of
ERP Systems
Expertise

Flexible
Approach &
Timely Delivery

Value for Money
Solutions &
Support

When is it time for a Health Check?

- Your business requirements are changing
- The operation and performance of your system is constraining the efficiency of your business processes
- Staff productivity and morale have significantly decreased
- You are experiencing serious system downtime and costly shortcomings
- Your system is not what it used to be

The ERP Systems' Optimisation Advantage

Clear View of your System's Health

An ERP Health Check assesses how your system is performing and reveals any current issues, with the opportunity to get a head start and address these.

Maximise your Return on Investment

Reviewing and optimising your system plays a significant role in maximising your return on investment, enjoying the original intended benefits and supporting a continuous improvement agenda.

Optimise Business Processes

As your organisation evolves, business processes transform, complicating the operation and performance of your ERP system. ERP health checks will assure your system remains best fit and aligns with best practice.

Proactively Plan for the Future

An ERP Optimisation Roadmap depicts your next steps, and visualises the specific steps that will lead you to ERP optimisation, and its associated long-term operational benefits and cost savings.

Maintaining your ERP, much like servicing a car

When you implement an ERP solution, it's much like buying a brand-new car; it needs to be serviced in order to continue to run optimally for your business and drive efficiencies.

The Roadmap to Success

Our Systems' Optimisation Approach

1 Discovery Phase

At this phase, our experienced consultants will perform a comprehensive review of how your business system work. Our aim is to determine key operational practices and processes that your organisation needs to operate effectively. Also, where systems are currently being used, to enhance these processes.

2 Analysis Phase

At this phase, our consultants will turn the information collected during the Discovery phase into a formal analysis, reviewing how you currently utilise your ERP system and processes, identifying your pain-points and capturing any inconsistencies between systems.

3 Options Phase

At this stage, our consultants will provide you with the different options and suggest a roadmap for achieving the best outcome, using the best fit solution for the organisation size and complexity.

4 Taking Action Phase

At the Taking Action phase, our consultants will help you with deciding which option is right for your business. We operate independently from software providers and will work with you and software partners to achieve your objectives in collaborative teams.

Get in touch with us today to find out how we can help you get the most from your system.
